NetSupport School

Cloud-based Classroom and Remote Learning with Online Safety

classroom.cloud is a focused teaching, classroom management, and online safety tool. Cloud-based and easy to use, it helps teachers monitor and instruct in a school classroom or with remote learners – while the school can create a safe learning environment. It also comes with a Technician Toolkit, helping the IT team to maximize their school's technology.

- Interact with students in real time
- Support explanations with screen and audio sharing
- Monitor and remote control students' screens
- Track students' understanding and progress in real time using surveys
- Assign rewards to students during the lesson
- Student toolbar enables students to keep track of lesson details
- Support students with help requests - without their peers knowing
- Send an attention-grabbing message or instruction to each student's device
- Allow/restrict website and application usage
- Control USB and webcam use, plus mute/unmute audio on the students' devices - all during lesson time
- Online Safety toolkit with keyword monitoring, word cloud of trending topics and contextual intelligence to determine risk severity
- Microsoft SDS, Google Classroom, ClassLink and Clever integration
- Technician Toolkit including hardware and software inventory, and remote control
- Plus much more!
